

Wellis®

EUROPE'S LEADING SPA MANUFACTURER

HOLIDAY LET SPAS 2024

Models

SEVILLA PLUG & PLAY	6
PORTO	8
CORDOBA	10
VALENCIA	12

Minimum requirements

for hot tubs in business setting

Ozone generator or UV-C In-Clear system water sanitisation with antibacterial filters.

24-hour filtration of the water.

Spa Frog - for constant supply of bromine and other chemicals to keep the water crystal clean.

No perishable items fitted such as headrests, diverter or air valves. Headrests can harbour germs and bacteria and they can also damage easily.

A Chlorinator is fitted to the Hot Tub to ensure PH levels remain balanced and there is enough free chlorine in the water to kill harmful bacteria.

Filtration system

24-hour filtration

In-line chemical dosing system

No perishable items fitted

Chlorinator

*Regulated by the HSE and BISHTA

*Enforced by the HSE and Local Authorities

Exceeding HSG282 compliance

Drainage time reduced to 9-10 minutes through the fast drain valve

Fast-heating options including renewable energy available to reduce heating time from 17 hours to 3-5 hours and save up to 75% on your energy bill.

2-3 button spa control panel to prevent user damage. Main spa controls are hidden in the cabinet.

Our hot tubs are built to be eco-friendly and use as little energy to run as possible using today's technology. For this reason they also come heat pump and fast heater ready.

Wellis® hot tubs offer a truly spa-like guest experience - more than just a few bubbles - which guarantees happy return customers and high occupancy.

Control up to 100 spas at anytime from anywhere.

Acquire the products without the upfront capital expense. Pay as little as £14* a week for a hot tub.

We offer discounts of up to 20% on our Spas and fast heating equipment such as air-source heat pumps and heat exchangers.

We plant 5 trees on your behalf and donate to Chestnut Tree House Children's Hospice for every spa you buy.

 - »» return customers, high occupancy,
Competitive Advantage
 - »» FAST RETURN ON INVESTMENT

The logo features the word "Life" in a white, sans-serif font. The letter "L" is partially enclosed by a green circular graphic that resembles a leaf or a globe.

THE HIGHEST LEVEL OF ENERGY EFFICIENCY

ECO-EFFICIENCY

A woman in a pink bikini is relaxing in a white hot tub. The hot tub is situated on a wooden deck in a lush, green environment with a waterfall in the background. The hot tub has a grey base with a green LED light strip along the bottom edge. A grey step is visible in the foreground.

Wellis[®] is the leading manufacturer of the most eco-friendly, sustainable and energy efficient spas on the market today

We have two main objectives that we constantly strive to improve:
Thermal insulation & Energy efficient pumps

30% of the energy used by a spa pump is turned into heat

Eco-friendly Fast Heating

Our eco-friendly fast heaters reducing heating time from 17 hours to 1.5h - 5h and running costs of the spa by up to 75%.

Reflective Thermal Barrier

The triple Reflective Thermal Barrier (RTB) insulation in our spas collects waste heat & energy and reflects it back into the spa's plumbing. Our Spa Covers are part of the RTB system. This RTB system reduces running costs to a minimum and are CFC free!

Wellis® Heat-lock System

2cm foam insulation on the inner cabinet walls and floor of the spa captures the waste heat generated by the pumps and reflects it back into the hot tub. No spray foam insulation is used allowing free access to all spa equipment within the spa cabinet, and to protect the environment.

Poli-Max™ Shell

Self insulates for both heat and sound; significantly lowering running costs, an entirely eco-neutral Acrylic/Abs/polymer laminate system that results in a stronger, lighter, more eco-friendly and ultimately bio degradable product.

WPS Cabinet Frame

Made from fully recyclable material. This special polymer ensures exceptional stability and life for the Spa's structural frame.

Moulded ABS Floor

A reflective barrier insulation system extends across the floor pan to prevent valuable waste heat drawn through the base by the "cold sink effect" that is created by damp ground.

Energy-saving Pumps

W-EC pumps have very low power consumption (0.25 kW/h), long life, and silent operation, they are environmentally friendly and cost-effective. Our energy-saving pumps also reuse residual heat.

Sustainability & Charities

We plant 5 trees on your behalf to reduce your carbon footprint and donate to Chestnut Tree House Children's Hospice for every spa you buy.
